

# **On the importance of low-dimensional structures for data-driven modeling**

Jean-Christophe Loiseau

May, 13<sup>th</sup> 2022

# Who am I ?

- Maître de Conférences in Fluid Dynamics and Applied Math.
- Machine-learning enthusiast with application to engineering systems.
- Data-efficient models with guarantees of optimality or interpretability.

Aerodynamics

Rocket science

Heat exchange

# N. Wiener's classification

# Example: System identification

## **A brief overview of SVD**

## Singular value decomposition

$$\begin{aligned} \mathbf{A}\mathbf{v}_i &= \sigma_i \mathbf{u}_i \\ \mathbf{A}^T \mathbf{u}_i &= \sigma_i \mathbf{v}_i \end{aligned}$$

Generalization of the *eigenvalue decomposition* to **non-square matrices** by E. Beltrami (1873) and C. Jordan (1874). The first efficient numerical algorithm was developed by G. Golub *et al.* in the late 1960s.
